PRODUCT ONE-PAGER · JULY 2026

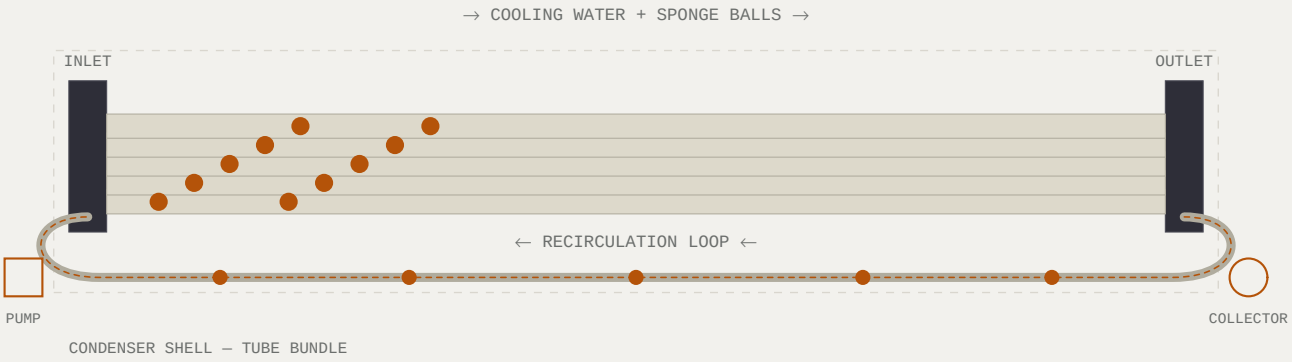
Clean condensers

while the plant runs.

VOCCSYS is Vulcan Industries' patented online condenser cleaning system. A continuous sponge-ball circulation loop scrubs scale and biofilm from every tube while the plant remains in operation.

0 hrs	1–3%	<12 mo	24/7
SHUTDOWN	HEAT RATE	PAYBACK	OPERATION

HOW IT WORKS



01	**INJECT**	Balls injected into cooling water inlet header.
02	**SCRUB**	Balls flow through every tube, cleaning on every pass.
03	**COLLECT**	Downstream strainer captures 100% of balls.
04	**RECIRCULATE**	Recovery pump re-injects balls for continuous loop.

KEY BENEFITS

Lower fuel & auxiliary power
Every % of vacuum recovered = direct fuel savings.

Stable heat rate
Flat performance at design conditions.

No production loss
Cleaning happens with the plant running.

Zero chemicals
Fully mechanical scrubbing. Zero discharge risk.

Extends tube life
Prevents pitting, under-deposit corrosion, biofouling.

Retrofit-ready
Installs on existing condensers with minimal piping mods.

SPECIFICATIONS AT A GLANCE

Models	VCS-500 / VCS-1000 / VCS-2000 / Custom
Tube ID range	18 mm – 32 mm
Tube materials	SS 304 / 316L · Titanium · Cu-Ni · Admiralty Brass
Ball material	Natural rubber / EPDM foam · Std / Abrasive / Extra-abrasive
Ball recovery	100% via mesh strainer / basket type
Control	PLC + HMI · SCADA-ready · ΔP / flow / turbidity / ball-count
Design code	TEMA / HEI aligned · 12-month warranty from commissioning
Power	415 V, 3ϕ, 50 Hz (customisable)

REQUEST AN ENGINEERED PROPOSAL

Share your plant details and one of our engineers will get back with a tailored technical proposal — typically within 2 working days.
